

KnowledgeLake Cloud Capture Services

The effort-saving, cost-cutting, low-overhead, content capture platform.

A Powerful, Flexible & Efficient Document Processing Platform

Centralize & Secure

Centralize, process and secure documents from multiple locations, departments or for the entire enterprise

Control Your Costs

More throughput with less staff and never pay page count or click charges

Improve Accuracy & Speed

Validate data against databases, ERP and other line-of-business systems

Flexible & Rapid Deployment

Deploy in the Cloud or on-premises with no clunky, restrictive client software to install

Web-Based...Everything

Users and administrators enjoy a modern, lightweight and responsive interface with any device - even scanning using a web browser is supported

Extensible & Performant

Progressive, scalable and Cloud-ready architecture with App model, APIs and robust SDK

Automated capture, classification and extraction of unstructured data get a boost from machine-learning technology.

- Reduce paper, storage and physical shipping costs
- Access information quickly
- Decrease risk and liability

Get content from anywhere. KnowledgeLake makes it easy to centralize documents and other content, ad hoc or in bulk from limitless sources and formats:

- Scan or upload documents via a web browser
- Local, desktop or high-volume scanners
- Multi-Function Devices (MFP/MFD)
- Microsoft Outlook, Outlook Web, Office Desktop and Office 365 Applications
- Shared, team or network "watch folders", XML and CSV files
- IMAP or Microsoft Exchange/Office 365 inboxes

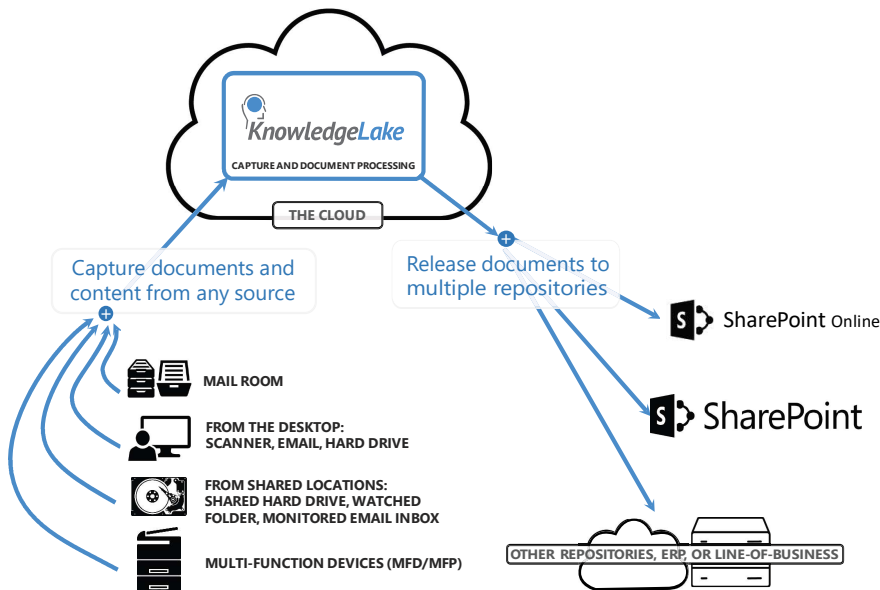

Tag and process documents easily. Recognize, categorize and route content intelligently based on document type — taking the guess work out of how and where to store things.

Leverage line-of-business applications such as accounting, CRM, ERP or other databases for automatic classification and extraction of metadata with machine-learning technology — ensuring speed and accuracy.

Send information anywhere. KnowledgeLake is pre-configured to work with Microsoft SharePoint, SharePoint Online, file shares, FTP and more.

With the ability to inherit already-built taxonomy and metadata structures from your systems, you can be confident that content is where it is supposed to be and easily findable regardless of location.

A flexible capture platform to import, process and route content to almost any repository.

Gain better control over document processing.

With nimble configuration tools, you choose how content is imported, cleaned up, processed and released to your repository or workflow driven business process.

Creating document workflows used to require costly and complicated code and script development. With KnowledgeLake, creating content workflow and activities is as simple as drag-and-drop in the Visual Workflow Designer. No costly development is required, as custom content workflow and activities can be created with ease.

Easy Automation at Affordable Costs.

Reduce risk of data entry errors plus the costs that come with manual processing of documents. The automated classification and data extraction via KnowledgeLake's machine-learning technology enables organizations across the industry spectrum to accurately and efficiently process large volumes of documents.

This means documents can be processed more efficiently, because they are indexed many times faster and more reliably than a manual operator.

TECHNICAL HIGHLIGHTS

- Scan from TWAIN devices or multi-function copiers
- Upload from any browser-enabled device
- Machine-learning technology to automate classification and metadata keyword tagging
- Database lookups & validation
- OCR and convert documents to TIFF & Full-Text PDF
- Drag-and-drop from Microsoft Outlook & simple upload from Office applications
- Flexible integration with line-of-business (LOB) applications
- Fully extensible platform with robust set of APIs

Deploy quickly and flexibly on-premises or in the cloud.

KnowledgeLake Cloud Capture Services support lightning fast deployment to the cloud or on-premises.

That's right, a truly enterprise-capable document processing platform with no software to install on users' desktops or other devices. Workers simply gain secure access via their web browser.

Less stress for IT.

- No bulky thick-clients to install on desktops
- Simple administration and configuration
- Use for multiple departments and use cases
- Enjoy outstanding technical support with 98%+ customer satisfaction rating
