

The user-friendly platform that improves productivity, decision-making and compliance.

Flexible Document & Content Capture Made Easy

Scan directly from the web browser or import content from any location including MFPs/MFDs, monitored directories and inboxes, CSV/XML import, e-mails, client applications and more

Simple uploading, tagging and routing of content to your repository without user decision-making or confusion

Work within Microsoft Outlook and other Office applications

Efficient Document Conversion & Processing

Enhance the quality of scanned documents: auto-rotate, de-skew, remove noise and hole punch marks, clean up color and more

Convert to Full-Text PDF format for more structured and findable content

Employ Optical Character Recognition (OCR) and barcode recognition for more actionable document data and automation

Metadata Keyword Management

Easily tag with metadata keywords and boost accuracy with assisted lookups and validation using external data sources

Automatically classify and tag content without a complicated set up process

Leverage taxonomies already in place as well as metadata structures from multiple ECM systems and other repositories

Work with Multiple Repositories & Systems

Release to multiple destinations such as Microsoft SharePoint, SharePoint Online, file shares, FTP and more

Two-way communication with the repository and inheritance of taxonomy eliminates complex mapping and ongoing maintenance

Ensure proper governance with confidence that content is where it is supposed to be and easily findable regardless of location

Technical Highlights

Scan from TWAIN devices or multi-function copiers

Upload from any browser-enabled device

AI and image recognition to automate classification and metadata keyword tagging

Database lookups & validation

OCR and convert documents to TIFF & Full-Text PDF

Drag-and-drop from Microsoft Outlook & simple upload from Office applications

Flexible integration with line-of-business (LOB) applications

Fully extensible platform with robust set of APIs

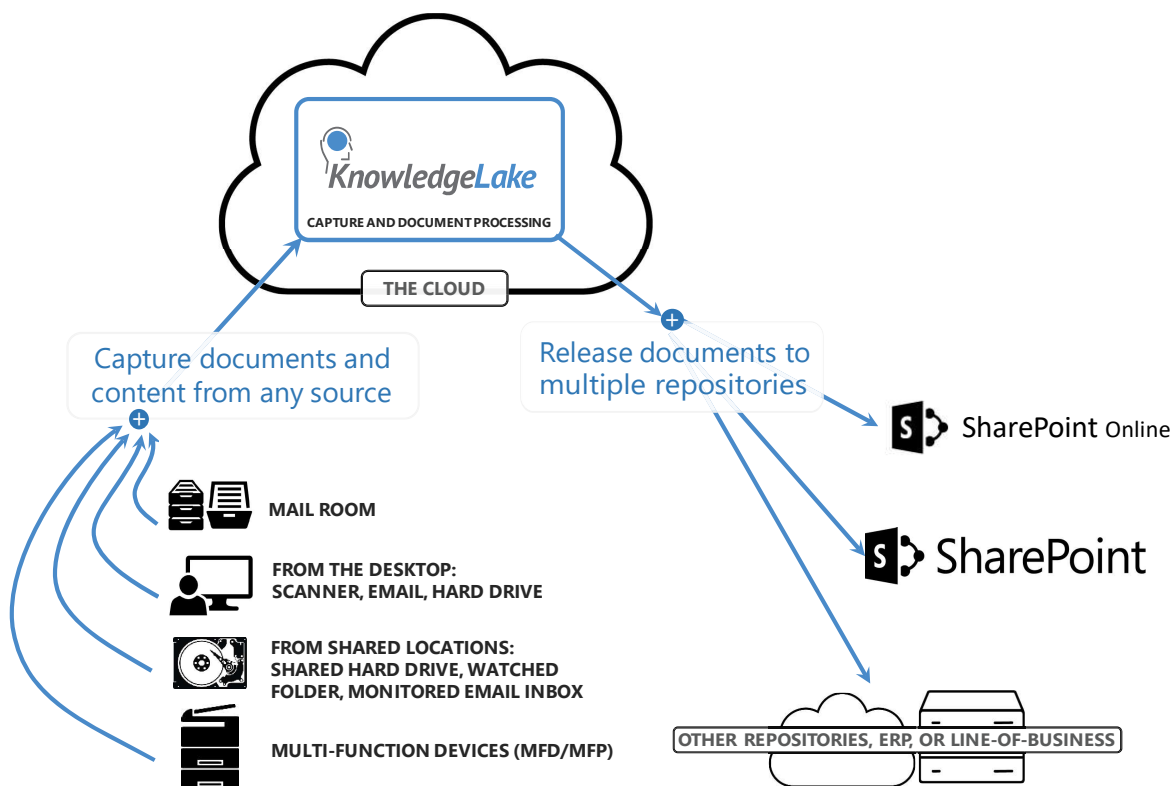

Client Success

"We have greatly streamlined our document management process, saving time and money for our Accounts Payable and Accounts Receivable departments."

Scott Musich
Application Specialist II

A flexible digitization platform to import, process and route content to multiple repositories.

Gain better control over document processing.

With nimble configuration tools, you choose how content is imported, cleaned up, processed and released to your repository or workflow driven business process.

Creating document workflows used to require costly and complicated code and script development. With KnowledgeLake, creating content workflow and activities is as simple as drag-and-drop in the Visual Workflow Designer. No costly development is required, as custom content workflow and activities can be created with ease.

Deploy quickly and flexibly on-premises or in the cloud.

KnowledgeLake Cloud Capture Services supports lightning fast deployment to the cloud or on-premises.

That's right, a truly enterprise-capable document processing platform with no software to install on users' desktops or other devices. Workers simply gain secure access via their web browser.

Easy Automation at Affordable Costs.

Reduce risk of data entry errors plus the costs that come with manual processing of documents. The automated classification and data extraction features of KnowledgeLake enable organizations across the industry spectrum to accurately and efficiently process large volumes of documents.

This means documents can be processed more efficiently, because they are indexed many times faster and more reliably than a manual operator.

Less stress for IT.

- No bulky thick-clients to install on desktops
- Simple centralized administration and configuration
- Use for multiple departments and use cases
- Enterprise level scalability
